EDUCATION

University of Texas at Austin

B.S. Computer Science Honors

B.S. Mathematics

Aug 2020 – Dec 2023

Major GPA: 3.92

SKILLS

Languages

Python, TypeScript, SQL, Java, C#

Frameworks & Tools

Google ADK, Pydantic AI, MCP (FastMCP), FastAPI, React, React Native, Tailwind, Gemini fine-tuning

WORK EXPERIENCE

Senior AI Engineer

Crunchyroll

Oct 2025 – Present

- Built an Okta-authenticated data agent on a custom MCP server over BigQuery, used by ~20 colleagues in their day-to-day work to answer questions that previously needed an engineer.
- Prototyped CI/CD eval gates that block agent releases on failing eval sets; designed per-user data access with Okta groups, scoped service accounts, and BigQuery row and column-level security.
- Created the team's FastAPI + React template for internal apps (Cloud Run, Okta SSO), now powering our AI-pipeline dashboard (latency, token cost, human-override rates) and human review UIs.
- ---OMITTED---
- **Skills:** Python, FastAPI, Google ADK, MCP, React, BigQuery

Software Engineer, Applied AI

Crunchyroll

Jul 2024 – Oct 2025

- Built the shared Python library behind our three AI services: unified model call interface, exponential-backoff retries plus token and cost tracking.
- ---OMITTED---
- **Skills:** Python, FastAPI, Pydantic AI, Gemini, MongoDB, GCP, Terraform

Software Developer

Paycom

Dec 2023 – Jun 2024

- Redesigned the candidate application page for mobile-responsive use on the ATS team.
- **Skills:** PHP, TypeScript (React), C#, Git, Jira

Product Engineer Intern

Deloitte

Jun 2023 – Aug 2023

- Built a Java JUnit analysis tool over 2,500+ IMS tests, cutting testing time from 35 minutes to 30 seconds.
- **Skills:** Java (JUnit, Reflection, Class Loading), Cobol, IMS DB

PROJECTS

NumBlitz – Mental Math Mobile App – [Portfolio Entry](#), [App Store](#)

- Shipped a K-12 mental-math app with 100+ tricks for iOS and web (React Native, Supabase); live on the App Store.
- Wrote a custom language for defining math tricks and generating unlimited related practice problems, served by FastAPI on a self-hosted Raspberry Pi with auto-deploy from GitHub, a web console for logs and restarts, and a Cloudflare Tunnel.
- **Skills:** TypeScript (React Native, Expo), Python (FastAPI), Supabase, Cloudflare Tunnel, NativeWind

Compiling Pythonic to Brainf**k – [Portfolio Entry](#), [YouTube Video](#)

- Built a 32-bit CPU in Brainf**k, an assembly language, and a Python-like language and compiler targeting it.
- **Skills:** Python, Assembly, Compilers, Brainf**k
